

Questions to ask / go off of for flow.

I did not stick to these questions exactly because sometimes the interviewee already answered the part, or didn't seem necessary.

- Please state your name and state your consent.
- If you were to use Loading.js, how would you go about using it?
- Create a sample loader using the docs given and the example.
 - May be pointless to say if they start making the loader from the question above.
- If you made errors, did the error handling helped you?
- What would you change to make this more suitable in your situation?
- What documentation would you add (if any?)
- What control do you wish to be/ not be here?
- After using this a couple times, do you feel that you could figure out how to use loading.js without referring to the docs?
- Any Questions?
